NEW BETE HYDROWHIRL® DISC

INNOVATIVE CLOG-RESISTANT TANK CLEANING SOLUTIONS DESIGNED FOR CLEAN-IN-PLACE (CIP)

The New **HydroWhirl Disc** can be entirely submerged without clogging and is the perfect solution for **Clean-in-Place** (CIP) applications where it is not possible to remove the assembly during the manufacturing process.

Powerful fan spray inserts provide superior cleaning performance for removing difficult soils inside tank and equipment surfaces. The **hydrostatic wear-free PTFE slide bearing** is designed for durability and long wear life.

This nozzle is the largest capacity free-spinning design ideal for cleaning tanks up to 11 ft. in diameter and resolving clogging issues where particulates in the cleaning fluid can seize other nozzles.

The **HydroWhirl Disc** is available in 316L Stainless Steel, which is FDA-compliant and suitable for food and beverage applications. Visit https://bete.com/product/hydrowhirl-disc-hwd-tank-cleaning-nozzles/ for detailed datasheets, spray pattern videos, and more.
